Spontaneous Current Sheets in Magnetic Fields reconnection events "nanoflares" in the local surfaces of tangential discontinuity throughout the bipolar magnetic fields of active regions. The degree of fluctuation, i.e., the duration and intensity of the individual nanoflare, is not quantitatively defined yet by the theory.

In detailing his theory of the spontaneous formation of tangential discontinuities (current sheets) in a magnetic field embedded in highly conducting plasma, Parker shows how it can be used to explain the activity of the external magnetic fields of planets, stars, interstellar gas clouds, and galaxies, as well as the magnetic fields in ...
